## Explanations:

Cases = C  
 Death(s) = D  
 Created (t): Date when the report was generated (referenced as t)  
 t - n: Report generation day minus n days  
 New Cases: Compared to the day before  
 New Death: Compared to the day before  
 Growth Rate: Groth rate compared to the day before in percent  
 Time to double: The time it takes until the actual cases/deaths are doubled in days  
 Recovered: Not used because this is not an official and countable number  
 CFR: Case Fatality Rate (letality). Not used because this can be computed only AFTER a pandemic. Actual not a serious number.
