Explanations:

Cases = C Death(s) = D

Created (t): Date when the report was generated (referenced as t)

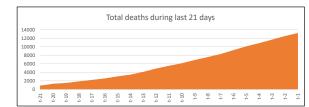

t - n: Report generation day minus n days
New Cases: Compared to the day before
New Death: Compared to the day before

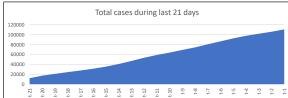

Growth Rate: Groth rate compared to the day before in percent

Time to double: The time it takes until the actual cases/deathes are doubled in days

Recovered: Not used because this is not an official and countable number

CFR: Case Fatality Rate (letality). Not used because this can be computed only AFTER a pandemic. Actual not a serious number.
